Notification - from Lucy Personal Health Record

Information Provided By Patient
This document consists of information that has been entered by the patient. It may not have been verified by a medical professional.

Allergies

Allergen	Date Noted	Severity	Reaction	Comments
Milk	2000	Mild		This seemed to get worse once I entered college. I hardly drink milk at all any more. I wonder if I should start taking calcium supplements?

Current Medications

Medication	Start Date	Administration	Comments
Citalopram 20 MG Oral Tablet [Celexa]	06/2002	half pill Once a day	Prescribed for depression, but I've been feeling a lot better for the past several months. I'd like to reduce my dosage if possible.
Ethinyl Estradiol / Norgestrel Oral Tablet [Lo/Ovral]	2004	1 Once a day	
Ibuprofen 200 MG	08/2008	2 pills As needed	This is getting to be an almost daily thing for me - Dr. Green says my jaw hurts so much because I grind my teeth when I sleep and he wants me to stop drinking so much coffee. But I never had this problem before he put that crown on my back tooth.

Problems

Problem	Date Noted	Comments
Alcoholism		Sober since 2/17/08.
Depression	1993	I actually have been feeling better for the past few months. The medications seem to be helping and I feel like I'm starting to get my life back on track.
